

# Bag Break Station B40S Series

## Series

Tool Free Take Apart Process Equipment and Systems

### **SERIES 40R Bag Break Stations**

Self contained bag break station features tool free top loaded filter media with ultra-clean round body. Automatic pulse jet control keeps media clean for aggressive dust control. All tool free take apart includes dust plenum and filter media. Quick cleaning without tools ensures a safer production environment.

### **ROBUST CONSTRUCTION**

Heavy duty construction that includes #12 ga construction enable our bag breaks to stand up to aggressive use.

Designed with form and function playing an equal role-the result is a good looking addition to a plants process.

Models suitable for food grade, USDA-dairy and general industrial applications.

### **Ergonomic Operator Interface**

Nominal bag tipping height of 36" provides the perfect vantage point for 25KG bag handling. 40" wide tipping area allows for most bags to fit inside and be fully supported by grate while emptying. Wide integrated bag shelf provides further operator assist. Bag grate is dropped down and tipped slightly back into housing which reduces spilling of powder.

Rear tool free plenum cover is easily removed from housing for complete front access to dust plenum.

### **POWDER CONTROL**

Whether its our self contained or remote filtered model, dust is controlled through a high velocity down draft airflow at grate. Rear dust plenum has been oversized to reduce velocity which keeps dust and powder where it should be-your process. Self contained filter includes two rows of tool free removed bag filters that are reverse pulse jet cleaned. Bag cages are simple slip fit into snap band media-fast, tool free and leakproof.

### **FLEXIBLE**

Many options are available with this series. Bag breaks are available with hopper agitators, fluidizers, process bin activators and vibratory scalpers.
